ECN1 EDUCATION

ECN1 Platform Setup Guide

Prepare MetaTrader 5, cTrader, or ECN1 Terminal and verify account details before trading.

Before you sign in

- Use the official ECN1 access path and the credentials issued for your account.
- Confirm account type, server, currency, and platform permissions.
- Keep passwords and authentication codes private.
- Use a secure device and update the platform from its official distribution channel.

MetaTrader 5

- Install the MT5 application from an official source.
- Search for the broker/server name supplied in your ECN1 account details.
- Enter the assigned login credentials and verify the connected account.
- Check symbol names, order size, account currency, and trading sessions.

cTrader

- Open the cTrader access path supplied for your account.
- Sign in with the credentials and identity assigned to your profile.
- Confirm account selection, watchlist symbols, and available order types.
- Review chart timeframe, order size, and attached risk instructions.

ECN1 Terminal

- Sign in to the ECN1 client area and open the authenticated terminal.
- Confirm the account and server shown in the terminal.
- Verify the symbol and market-data source before interpreting a chart.
- Check the order ticket and account state before submitting an order.

If something does not match

Pause and contact ECN1 support with the platform name, account identifier, symbol, time, and a screenshot that does not expose passwords or authentication codes.

Charting note

The current ECN1 terminal chart surface uses Lightweight Charts. TradingView Advanced Charts or Trading Platform are separate products and require access, a compatible datafeed, and (for trading features) a broker integration.

Trading involves risk. This guide is general education, not investment advice, a recommendation, or a promise of results. Account terms, instrument access, pricing, and trading permissions are defined by the information shown for your ECN1 account.
